## 1 Installation with creation of file system using fdisk (manual) with at least one logical partition

We will first list all the existing partitions. Then add a partition with the help of fdisk GUI. Then again list the partitions.

#### Steps to Follow

Step 1 : List the partitions

Step 2: Adding a new partition

```
rect contact for for help): a

Consend for for help): a

For tested (contactor for logical partitions)

Consend for for help): a

Consend for for help): a

Consend for for help): a

For tested (contactor for logical partitions)

Consend for for help): a

Consend for for help):
```

Step 3: List partitions again to view the new added partition

## 2 Root Password change using boot loader options

Since everything happens during the boot time. It's unable to click screen shots. So I would just lay out the steps of changing the password during boot.

#### Steps to Follow

- Step 1: Restart the computer
- Step 2: Open the Grub GUI during boot up.
- Step 3: Highlight the OS in which you want to change the root password.
- Step 4: Press E to edit that OS.
- Step 5: Edit the line starting with linux. By appending rw init=/bin/bash
- Step 6: Now you will be taken to the root shell.
- Step 7: Run command passwd. and change the passwd
- Step 8: Run exec=/sbin/init.

### GNU GRUB version 2.02~beta2-36ubuntu10

```
insmod part_msdos
       insmod ext2
       set root='hd0,msdos1'
       if [ x$feature_platform_search_hint = xy ]; then
         search --no-floppy --fs-uuid --set=root --hint-bios=hd0,msdos1\
--hint-efi=hd0,msdos1 --hint-baremetal=ahci0,msdos1 aaa7b378-92a3-4b7c\
-9465-f2d95b25d107
       else
         search --no-floppy --fs-uuid --set=root aaa7b378-92a3-4b7c-946\
5-f2d95b25d1@7
       fi
       linux
                    /boot/vmlinuz-4.4.0-34-generic root=UUID=aaa7b378-9\
2a3-4b7c-9465-f2d95b25d107 ro quiet splash $vt_handoff init=/bin/bash_
                     /boot/initrd.img-4.4.0-34-generic
       initrd
```

### GNU GRUB version 2.02~beta2-36ubuntu10

## \*Ubuntu

Advanced options for Ubuntu Memory test (memtest86+) Memory test (memtest86+, serial console 115200)

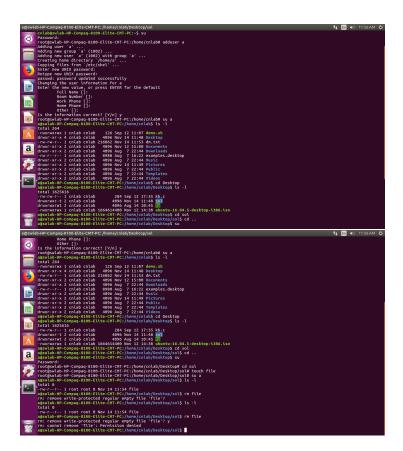

# 3 Directory creation in which all can write but only owner can delete files.

This can be done via sticky bit. This helps only the owner of the files to delete from that particular folder. No one else can delete the files in that folder.

### Steps to Follow

Step 1 : Making a folder named  $\mathbf{newFold}$ . Creating a file named  $\mathbf{file.txt}$ .

Step 2 : Switching to another user. Then trying to delete this file.

## 4 Write a cron job to remote power up a system in a LAN

For this assignment we need to have the MAC address of the other system on the LAN for which we have to perform this cron job.

#### Steps to Follow

Step 1: First open the file /etc/crontab

```
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
# m h dom mon dow command
* * * * * * ./script.sh
```

Step 2: Edit the file.

```
while true; do
    echo "$(date)" >> date.txt
    sleep 5;
done
```

## 5 Write a cron job to remotely shutdown a Linux system.

For this assignment we need to have the MAC address of the other system on the LAN for which we have to perform this cron job.

#### Steps to Follow

Step 1: First open the file /etc/crontab

```
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)
#
# m h dom mon dow command
# * * * * ./script.sh
```

Step 2: Edit the file.
